

Class, Objects and Exception 2

4-1 请写出以下程序运行结果:

```
class A
{
    int x;
    String s;
};
class HelloWorld
{
    public static void main(String[] args)
    {
        A a= new A();
        System.out.println(a.s);
        System.out.println(a.x);
}}
```

null (2分)

0 (2分)

4-2 请写出以下程序运行结果:

```
class ValHold{
       public int i = 10;
public class ObParm{
       public static void main(String argv[]){
               ObParm o = new ObParm();
               o.amethod();
       public void amethod(){
               int i = 99;
                ValHold\ v = new\ ValHold();
               v.i=30;
                another(v,i);
                System.out.print( v.i );
        }
        public void another(ValHold v, int i){
                i=0;
                v.i = 20;
```

```
private Bar b;
         Foo() {
             System.out.println("Foo");
             b = this.new Bar();
         }
     }
     class FooToo extends Foo {
         protected class Bar {
             protected Bar() { System.out.println("FootToo.Bar"); }
         public static void main(String[] args) {
             new FooToo();
4-4 请写出以下程序运行结果:
                                                                                                              作者
                                                                                                                          翁恺
     package test;
                                                                                                              单位
                                                                                                                         浙江大学
     public class Test {
        public static void main(String[] args) {
           Test t = new Test();
           t.show(new Car(){
             public void run(){
                 System.out.println("test run");
              }
           });
        }
        public void show(Car c){
           c.run();
           c.show();
     }}
     abstract class Car{
        public void run(){
           System.out.println("car run");
        public void show(){
            System.out.println(getClass().getName());
     }}
     test run
                          (2分)
     test.Test$1
                          (2分)
```

4-5 请写出以下程序运行结果:

```
class Width {
    public static final int SINGLE = 1;
}

class Shape {
    public void draw(int Width) {
        System.out.println("Shape.draw()"+width);
}
```

```
String s = "hello";
try {
    s = s+" world";
    s.toUpperCase();
    String[] a = s.split("o");
    System.out.println(a.length);
} catch (Exception e) {
    System.out.print(s);
} finally {
    System.out.print(s);
}}

3 (2分)
```

hello world (2分)

```
4-7 给出以下代码:
```

```
public class Test {
    public int t=4;
    public static void main(String[] args) {
        new Test().NumberPlay();
    }
    public void NumberPlay() {
        int t=2;
        t = t+5;
        this.t = this.t-2;
        t = t-this.t;
        System.out.println(t+this.t+"ok");
    }
}
```

程序运行后输出结果为: 7ok (2分)
